Refurbishment Service
Airport Conveyors

Check In is the first and often the last experience the passenger has with the baggage handling system when departing.

With passenger numbers and flights ever increasing the use of the Check In facility is paramount to the smooth running of the airport.

Downtime because of breakdown can cause lengthy delays and put pressure on the other check in desks to cover the short fall.

As one of the world foremost Airport Baggage Handling Conveyor system manufacturers, Robson’s team of Conveyor engineers offer the service of Refurbishment and Servicing of the Check In Baggage Conveyors. The Robson refurbishment service also extends to conveying equipment manufactured by others.

Refurbishment Service includes:

• The transport of the conveyors to Robson, where there is the test equipment and resources to ensure a thorough service

• Full electrical and mechanical inspection and overall ensuring all powered items are checked and validated to give optimum performance

• Conveyor belts renewed ensuring accurate delivery in to the collection system

• Stainless steel panels polished or brushed, giving the conveyor a clean finish, removing scratches and debris accumulated over the years. Old brackets can be removed, holes filled and the panel re-grained to leave no marks

Are Your Conveyors:

• Tired and Worn
  Littered with labels and scratched from years of service and belts worn and slipping

• Electrically safe
  Suffering from damaged cables or plugs through entrapment are they Pat Tested with wiring and connections secure. Are They Safe?

• Noisy
  Loud squealing or annoying rumbling sounds

• Misfeeding or Stalling
  Causing bag jams on the collector, or the conveyor stalls when loaded

Conveyor Refurbishment Service
Solves all these problems, ensuring safety, performance and reliability, together with a modern renewed finish

• Re-grained Stainless Steel Casings
